Dear Mark Hanafin,

The financial risks of investing in new nuclear power plants

You may be interested in our new report “The financial risks of investing in new nuclear power plants”, a copy of which is enclosed. An electronic copy of this report, or updated versions of it, may be downloaded from bit.ly/JhdNtL.

As you will see, we have described five major sources of financial risk associated with new-build nuclear plants: market risk, cost risk, subsidy risk, political risk and construction risk. Any one of these provides good reasons for caution.

Please would you pass this information on to relevant people in your organisation.

I'll be happy to try to answer any questions you may have.

Sincerely,

Dr Gerry Wolff

Coordinator of Energy Fair
